Exact click sequence

1. **Evil CA** → click **Generate backdoored key + certificate**.
   You should immediately see certificate JSON in the output box.
2. **Victim Server** → click **Deploy victim-site.com**.
   You should see the certificate fingerprint and RSA modulus size.
3. **User Browser** → click **Visit https://victim-site.com**

.The legitimate page appears inside the white iframe.

Click **Submit encrypted secret**.
The output shows the RSA ciphertext.

MITM / Attacker → click **Clone victim-site.com**.

Return to **User Browser** → click **Enable MITM**.

Click **Visit https://victim-site.com** again.

The iframe now shows the attacker's cloned page.

Click **Submit encrypted secret** again.

In **MITM / Attacker**, keep attacker-master-secret and click **Recover victim private key**.

The output displays the recovered private exponent and decrypts both captured secrets.
